

BASS ELECTRONICS
M SERIES (M series electronics package)

1. Passive/Active - up=passive, down=active
2. Voicing - center - bypass; down is a mid-cut voicing and up is a mid-boost with high-end rolloff; both switch positions change their influence based upon the coil tap setting and pickup blend settings
3. Coil Tap - down both pickups are dual coil series humbucking, up both pickups are single coil using the neck side coil
4. Blend Control
5. Volume
6. Treble
7. Mid
8. Bass

U.S. Masters M Series basses combine functions of U.S. Masters proprietary MultiVoice Passive Voicing (MVP) circuit with a 3 band EMG active equalizer and U.S. Masters' custom-designed dual soapbar pickup set, made for U.S. Masters by Kent Armstrong. It is designed so you can quickly and positively make use of an extremely wide and diverse range of world-class bass voicings. The bass may be run passive or active: pickups direct out with only the coil tap and blend control influencing the sound (MVP bypassed), it may be run in passive mode with the MVP circuit engaged or it may be run active with the active EQ engaged. The EMG active EQ runs on 2 9 volt alkaline batteries. Make sure to unplug when not using the bass as to not drain the batteries.
